

维智地图文档

地图导入

添加模块依赖

添加模块, 把 wzMap 导入模块, 在主程序settings.gradle中加入模块编译

```
include ':wzMap'
```

配置 marven 库

在 build.gradle 中配置 marven 库, 需添加 mavenCentral()

```
buildscript {
    repositories {
        google()
        mavenCentral() // 添加 mavenCentral()
    }
    dependencies {
        classpath 'com.android.tools.build:gradle:7.2.2'
        // NOTE: Do not place your application dependencies here; they belong
        // in the individual module build.gradle files
    }
}

allprojects {
    repositories {
        google()
        mavenCentral()
        jcenter()
    }
}

task clean(type: Delete) {
    delete rootProject.buildDir
}
```

导入依赖

```
implementation project(path: ':wzMap')
```

在主应用AndroidManifest.xml中添加权限

```
<!--用于进行网络定位-->
<uses-permission android:name="android.permission.ACCESS_COARSE_LOCATION">
</uses-permission>
<!--用于访问GPS定位-->
<uses-permission android:name="android.permission.ACCESS_FINE_LOCATION"></uses-
permission>
```

```

<!--用于获取运营商信息，用于支持提供运营商信息相关的接口-->
<uses-permission android:name="android.permission.ACCESS_NETWORK_STATE"></uses-
permission>
<!--用于访问wifi网络信息，wifi信息会用于进行网络定位-->
<uses-permission android:name="android.permission.ACCESS_WIFI_STATE"></uses-
permission>
<!--用于获取wifi的获取权限，wifi信息会用来进行网络定位-->
<uses-permission android:name="android.permission.CHANGE_WIFI_STATE"></uses-
permission>
<!--用于访问网络，网络定位需要上网-->
<uses-permission android:name="android.permission.INTERNET"></uses-permission>
<!--用于读取手机当前的状态-->
<uses-permission android:name="android.permission.READ_PHONE_STATE"></uses-
permission>
<!--用于写入数据到扩展存储卡-->
<uses-permission android:name="android.permission.WRITE_EXTERNAL_STORAGE">
</uses-permission>
<!--用于发现和通讯蓝牙-->
<uses-permission android:name="android.permission.BLUETOOTH"></uses-permission>
<uses-permission android:name="android.permission.BLUETOOTH_ADMIN"></uses-
permission>

```

布局文件中加入WZMap

```

<com.wz.location.map.view.WZMap
    android:id="@+id/wzMapView"
    android:layout_width="match_parent"
    android:layout_height="match_parent" />

```

初始化 MAP

```

Mapbox.getInstance(context, Constants.MAPBOX_KEY); // 找维智提供该 KEY

```

图层样式

修改地图图层

```

if (checkedId == R.id.rb_default) {
    wzMap.setMapType(MapType.DEFAULT); // 切换地图样式
} else if (checkedId == R.id.rb_gray_white) {
    wzMap.setMapType(MapType.GRAY_WHITE);
} else if (checkedId == R.id.rb_light_blue) {
    wzMap.setMapType(MapType.LIGHT_BLUE);
} else if (checkedId == R.id.rb_dark_blue) {
    wzMap.setMapType(MapType.DARK_BLUE);
}

```

图层样式切换，需在 assets 目录的 dark_blue_style.json, default_style.json, gray_white_style.json, light_blue_style.json 等文件中，替换您申请的 key。

```
"tiles": [
    "https://api.newwayz.com/maps/tilestream/v1/layers/landcover-china-20210415/tiles/{z}/{x}/{y}?access_key=您的accesskey"
]
```

地图长按事件

```
wzMap.addOnMapLongClickListener(new Map.MapLongClickListener() { // 长按地图事件
    @Override
    public void OnMapLongClickListener(@NonNull LatLng latLng) {
        return;
    }
});
```

Mark 新增

Mark 初始化

```
ng LatLng = new LatLng(30.504129, 114.413968);
wzMap.addMarker(new MarkerOptions().title("武汉").snippet("武汉市 经纬度 114.413968, 30.504129").position(latLng).icon(BitmapFactory.decodeResource(MainActivity.this.getResources(), R.mipmap.ic_user)));
```

Marker 点击事件

```
wzMap.setOnMarkerClickListener(new Map.OnMarkerClickListener() {
    @Override
    public boolean onMarkerClick(Marker marker) {

        return false;
    }
});
```

Marker 拖拽事件

```
wzMap.setOnMarkerDragListener(new Map.OnMarkerDragListener() {
    @Override
    public void onMarkerDragStart(Marker marker) { // 开始拖动

    }

    @Override
    public void onMarkerDrag(Marker marker) { // 拖动中

    }

    @Override
    public void onMarkerDragEnd(Marker marker) { // 拖动结束

    }
});
```

绘制 InfoWindow

显示 InfoWindow

InfoWindow 是点标记的一部分，默认的 InfoWindow 只显示 Marker 对象的两个属性，一个是 title 和另一个 snippet，如果希望对 InfoWindow 的样式或者内容有自定义需求，可以参考如下内容。

```
marker.showInfoWindow();
```

隐藏 InfoWindow

```
marker.hideInfoWindow();
```

InfoWindow 动态配置布局

开发中

绘制多边形

多边形新增

```
// 声明 多边形参数对象
PolygonOptions polygonOptions = new PolygonOptions();

LatLng latLng1 = new LatLng(30.504984, 114.412932);
LatLng latLng2 = new LatLng(30.50163, 114.411925);
LatLng latLng3 = new LatLng(30.501726, 114.417833);
LatLng latLng4 = new LatLng(30.505428, 114.417184);
LatLng latLng5 = new LatLng(30.504984, 114.412932);
// 添加 多边形的每个顶点（顺序添加）
polygonOptions.add(latLng1, latLng2, latLng3, latLng4, latLng5);
if (Build.VERSION.SDK_INT >= Build.VERSION_CODES.M) {
    polygonOptions.strokeWidth(4) // 多边形的边框
        .strokeColor(getColor(R.color.purple_500)) // 边框颜色
        .fillColor(getColor(R.color.teal_200)); // 多边形的填充色
}
polygonOptions.setDottedLine(true);
polygon = wzMap.addPolygon(polygonOptions);
```

多边形删除

两种删除方式

```
polygon.remove(); // 多边形删除
wzMap.removeLayer(polygon.getId()); // 多边形删除
```

多边形更新

```
polygon.setVisible(true); // 设置多边形是否可见
polygon.setColor(getColor(R.color.teal_700)); // 设置多边形填充颜色
polygon.setWidth(4); // 设置多边形宽度
```

绘制线

线新增

```
List<LatLng> latLngs = new ArrayList<>();

latLngs.add(new LatLng(30.504101, 114.414058));
latLngs.add(new LatLng(30.504201, 114.414158));
latLngs.add(new LatLng(30.504301, 114.414258));
latLngs.add(new LatLng(30.504401, 114.414358));
latLngs.add(new LatLng(30.504501, 114.414458));
latLngs.add(new LatLng(30.504601, 114.414558));
latLngs.add(new LatLng(30.504701, 114.414658));

if (Build.VERSION.SDK_INT >= Build.VERSION_CODES.M) {
    polyline = wzMap.addPolyline(new PolylineOptions().addAll(latLngs).width(4)
        .setDottedLine(true).color(getColor(R.color.teal_200)));
}
```

线删除

两种方式

```
polyline.remove(); // 线删除
wzMap.removeLayer(polygon.getId()); // 线删除
```

线更新

```
polyline.setVisible(true); // 设置线是否可见
polyline.setColor(getColor(R.color.teal_700)); // 设置线填充颜色
polyline.setWidth(4); // 设置线宽度
```

绘制圆

圆新增

圆形由 Circle 类定义实现，构造一个圆形需要确定它的圆心和半径，具体的示例代码如下：

```
LatLng latLng = new LatLng(30.504101, 114.414058);

circle = wzMap.addCircle(new CircleOptions()
    .center(latLng)
    .radius(100f)
    .strokeWidth(5)
    .setDottedLine(true)
    .fillColor(getColor(R.color.teal_700))
    .strokeColor(getColor(R.color.teal_200)));
```

圆删除

```
wzMap.removeLayer(circle.getId()); // 第一种方式  
circle.remove(); // 第二种方式
```

圆更新

```
circle.setVisible(true); // 设置圆是否可见  
circle.setColor(getColor(R.color.teal_700)); // 设置圆边框颜色  
circle.setWidth(4); // 设置圆边框宽度
```

Demo 样例

打开想添加地图的Activity文件，并将以下代码添加到该文件中

```
package com.wz.wifi.maptest;  
  
import androidx.annotation.NonNull;  
import androidx.annotation.Nullable;  
import androidx.appcompat.app.AppCompatActivity;  
  
import android.Manifest;  
import android.content.pm.PackageManager;  
import android.graphics.BitmapFactory;  
import android.graphics.Color;  
import android.os.Build;  
import android.os.Bundle;  
import android.util.Log;  
import android.view.View;  
import android.widget.Button;  
import android.widget.RadioGroup;  
import android.widget.Toast;  
  
import com.wayz.location.WzException;  
import com.wayz.location.WzLocation;  
import com.wayz.location.WzLocationClient;  
import com.wayz.location.WzLocationClientOption;  
import com.wayz.location.WzLocationListener;  
import com.wz.location.map.Map;  
import com.wz.location.map.common.MapType;  
import com.wz.location.map.model.BaseOverlay;  
import com.wz.location.map.model.Circle;  
import com.wz.location.map.model.CircleOptions;  
import com.wz.location.map.model.LatLng;  
import com.wz.location.map.model.Marker;  
import com.wz.location.map.model.MarkerOptions;  
import com.wz.location.map.model.Polygon;  
import com.wz.location.map.model.PolygonOptions;  
import com.wz.location.map.model.Polyline;  
import com.wz.location.map.model.PolylineOptions;  
import com.wz.location.map.view.WZMap;  
  
import java.io.InputStream;  
import java.lang.ref.WeakReference;  
import java.util.ArrayList;  
import java.util.List;  
import java.util.Scanner;
```

```
